-----

1kWh = 1000W x 3600s = 36 x 10<sup>5</sup>Ws = 3.6 x 10<sup>6</sup>J. Hope this will help you. If you like my answer Please mark it as brainliest And Be my fol

Show that : 1kWh = 3.6MJ Get the answers you need, now!

Click here:[point\\_up\\_2](#):to get an answer to your question :[writing\\_hand](#):define 1 kwh give the relation between 1 kwh and joule

Answer:1kWh = 3.6 \* 10<sup>6</sup> JExplanation:We know,1 KW = 1000 W1 hr = 60 \* 60 secondsTherefore,1 kWh = 1000 Watt \* ( 60 \* 60 ) seconds 1 kWh = 103 W \*3600 s 1 kWh =

The relation between 1 kWh and Joule is 3.6 x 10<sup>6</sup>J. Explanation: The power is defined as P = tE Here, P is the power and its unit is W and E is the energy and its unit is J and t is the time its

Find an answer to your question prove that 1kwh=3.6x10<sup>6</sup> j

To show that 1Kwh=3.6 MJ Solution: We know that 1K w = 1000w 1hour = 3600s Substitute the values Then, we get 1K wh = 1000x 3600 J 1K wh = 3600000J 105 = 100000 1K wh = 36x 105J

Click here:[point\\_up\\_2](#):to get an answer to your question :[writing\\_hand](#):calculate the number of joules in 1kwh

In the video, they said that 1kwh is equal to 3.6\*10<sup>9</sup> J But, in the question and answer, they said that 1 kwh=3.6\*10<sup>6</sup> J. So, Please tell me which is correct?

Answer: 1 unit Explanation: One kilowatt-hour (kWh) is equal to one unit of electricity. So, 1 kWh = 1 unit. In most countries, electricity consumption is measured and billed in units or kilowatt
