More recently a study in New Zealand addressed the intended evacuation behaviour of residents and visitors at Napier City in the event of a tsunami (Fraser et al. 2013). In Japan,

"Estimating the Threat of Tsunamigenic Earthquakes and Earthquake Induced-Landslide Tsunami in the Caribbean," by William R. McCann, In Caribbean Tsunami Hazard: Proceedings of

ABSTRACT Tsunami modelling of potential landslide-induced tsunami in Makassar Strait is carried out to quantify possible damage to the nearby cities.

There are few studies that characterize potential landslide-induced tsunami sources within the Caribbean region. Among them, McCann (Reference 4) developed a map of "reference tsunami

In 1842, a major earthquake also occurred along the OSFZ offshore, which destroyed the cities of Cap-Haitien and Port-de-Paix due to shaking and an induced tsunami (Scherer, 1913; Fig. 2).

Abstract Landslide-induced tsunamis are one of the most important multi-hazard risks in light of landslide disasters. During the Fifth World Landslide Forum, a World Tsunami Awareness

Center, Boulder, Colorado, USA. McCann, 2006, Estimating the threat of tsunamigenic earthquakes and earthquake induced landslide tsunami in the Caribbean, in Caribbean Tsunami

For landslide volumes on the order of a few km³, frequency dispersion of the tsunami results in shorter wavelengths and faster wave amplitude attenuation, and limits the far-field
